frequency (Hz)
(c) Spectral-ratio fit, $\ln(A_i/A_j) = c - \pi f \Delta t^*$
$\ln(A_i/A_j)$
log spectral ratio
fit: Δt^* = -0.101 s, R^2 = 0.58
frequency (Hz)
(d) Fit quality over all 52 957 pairs
number of pairs
median = 0.144
example (p90) = 0.58
R^2 of the spectral-ratio fit
